

SUSTAINABILITY REPORT 2009
Unisource Canada Inc.

Delivering **Sustainable Value**

We are making sustainability a more integral part of all that we do everyday.

This is the second annual Unisource Sustainability Report.

It contains important information about our efforts to minimize our impact on the environment, our commitments to our employees and the communities in which they live and work, and our progress in making sustainability an increasingly integral part of our business.

The cover of this sustainability report is printed on Mohawk Loop Vellum 50%PC, which is made with 50% process chlorine-free post-consumer recycled fiber with the balance comprised of elemental chlorine-free virgin fiber. The text portion is printed on process chlorine-free Mohawk Loop Inxwell 100%PC, which contains 100% post-consumer recycled fiber.

The manufacturer purchases enough Green-e certified renewable energy certificates (RECs) to match 100% of the electricity used in its operations. Both papers are certified by SmartWood program of the Rainforest Alliance to FSC standards, which promote environmentally appropriate, socially beneficial and economically viable management of the world's forests.
